

What are the effects of the active water system?

The Vital Atomuh

The active water system not only makes the water that you drink and use for cooking delicious and safe, it makes dirt and stains on clothes and dishes come off more easily, leads to savings in water and detergent, and even contributes to you being more environmentally friendly and having more beautiful skin. By installing one unit in the water pipe of each household, the Vital Atomuh converts all the water in your home into safe water and helps you leave a healthy and comfortable life.

Reduces the chlorine odor in tap water.

Although chlorine originally has no taste or smell, the chlorine smell is generated when it combines with the metal ions and hard components in the water. The Vital Atomuh breaks down these combinations to reduce unpleasant chlorine odors.

Removing the dangers from your toilet (warm water spray bidet toilet seat).

Heating tap water increases toxic chlorine compounds. Because human membranes easily absorb chlorine, the Vital Atomuh makes this water safe by detoxifying chlorine.

Laundry comes out cleaner and saves on detergent.

The active water created by the Vital Atomuh penetrates into every corner of the fabric of your clothes and enable you to thoroughly clean dirt and stains with only about 1/3 of the detergent you usually use.

Makes everyday dishwashing easier.

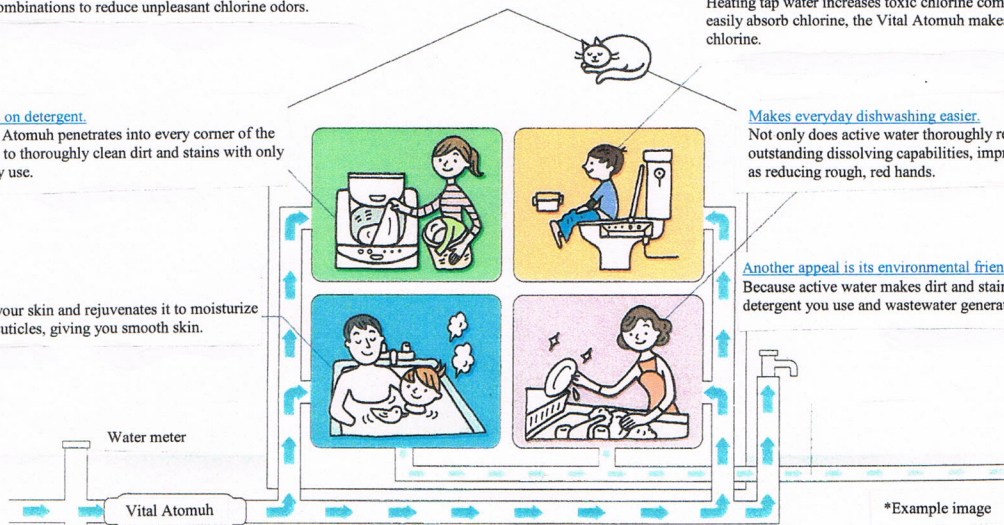

Not only does active water thoroughly remove dirt and stains from dishes, it has outstanding dissolving capabilities, improving detergent foaming and rinsing as well as reducing rough, red hands.

Smooth skin after your bath.

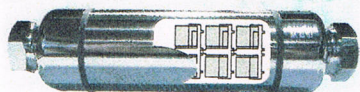

Active water removes the dirt from your skin and rejuvenates it to moisturize everything from your pores to your cuticles, giving you smooth skin.

Another appeal is its environmental friendliness.

Because active water makes dirt and stains easier to remove, it reduces the amount of detergent you use and wastewater generated for greater environmental friendliness.

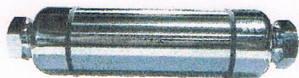

Uses chips made from sinter processing over 50 types of minerals from animals, plants and ores at high temperatures.

When tap water comes into contact with these chips, the chlorine ionizes and negative ions are generated. The chlorine is detoxified and antibacterial capabilities are increased. Atoms in the water are reduced in size, making them easier for the body to absorb to promote the rejuvenation of the cells in your body.

*Various types of active water units are available depending on pipe diameter and water usage volume. For more information, please contact the retailer below.

Superior functionality proven through test data.

For a four week period from May 25 to June 22, 2001, a container filled with water was left uncovered at room temperature. The chart below shows the test results for bacterial growth during the test period. Bacteria in the air (airborne bacteria) normally falls into the water and bacteria would breed and increase in number as the days passed.

Bacteriological Examination Results

Test item	Storage temperature	General bacteria (ml)	Coliform bacteria
Test date			
May 25	Room temperature	0	Negative
June 1	Room temperature	0	Negative
June 8	Room temperature	0	Negative
June 15	Room temperature	0	Negative
June 22	Room temperature	0	Negative

Test data / Certified by the Ministry of Health, Labour and Welfare

Kotobiken Medical Laboratories, Inc.

Even after four weeks, absolutely no coliform or general bacteria were detected. In other words, the effects of the active water unit were proven to continue for at least four weeks.

- *Although results may differ depending on the season, bacteria will start to breed and increase in regular tap water after around two to three days.
- *Effects in electrolyzed water only last for around three to four days.
- *Although the effects of ceramic active water units from other manufacturers are said to last for prolonged period, there are many that do not disclose any test results.

The Vital Patented Farming Method to Prepare for the Coming Food Crisis

The Vital Atomuh series water treatment units from our company increases the abilities of plants to resist pests and disease by allowing them to grow strongly, thereby allowing a decrease in the use of chemicals and improving income, quality, taste, and shelf life. It also easily reduces costs, allowing you to grow safe and secure crops.

Edamame Soybean
Comparison Photos
(August 2012)

Left side watered with Vital
water

Second from left watered
with Vital water

[The following are just a few of our many examples]

These are edamame soybeans grown as part of an elementary school project. They were all grown in the same kinds of pots and the same type of soil, using the same type of seeds. Because the school would be closed for summer vacation, which would prevent children from being able to water them, the children took them home and watered them.

All this child did was water the edamame plants every day with a watering can filled with Vital water.

Once summer vacation was over, the child took the plants back to school. You can clearly see the difference from those of the other children.

The vitality of the leaves, the amount of soybeans growing on the plant, the spreading of the roots, they were all incredible.

This is from only the one month of summer vacation.

What if this was your field or rice paddy?

Vital will make your plants grow strong!

A prefectural employee who came to ask about the Vital Farming Method as a special assignment from the governor of Niigata left saying, "you don't have to say anything, the photographs tell the whole story."

Ensuring safe and secure crops to prepare for the coming food crisis is an extremely difficult issue.

Why not incorporate the Vital Patented Farming Method that allows you to grow safe crops with peace of mind at little cost? Please feel free to contact us if you have any questions.
